

TARPAULIN SUPERSTRUCTURES for FIT-ZEL Trailer

Excellent. High quality. Attractive.

The efficient vehicles and trailers from ALGEMA FIT-ZEL
offer the right concept for all cases.

Not only can vehicles be protected from hail, storm, sun or rain, but also from prying eyes on the way from A to B with the tarpaulin solutions for trailers from ALGEMA and FIT-ZEL.

Protected from wind, weather and prying eyes - the variable built-on tarpaulin solutions for your trailer

Not only can vehicles be protected from hail, storms, sun or rain, but also from prying eyes on the way from A to B with the tarpaulin solutions for trailers from ALGEMA and FIT-ZEL.

They are not only used by bodywork and paint shops, but also for transporting classic cars, sports cars, promotion vehicles or in the field of motor sports.

Since the tarpaulin bodies are placed on the outside of the trailers, all comfort functions for loading and unloading are retained. The robust frame construction made of light aluminium struts guarantees a stable body and safety when driving.

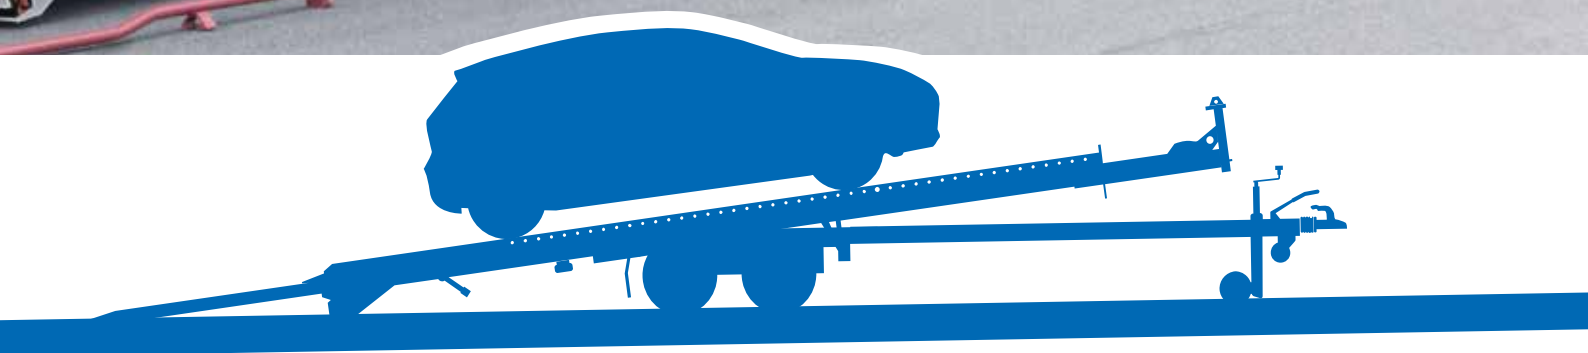

The well thought-out complete solution

With the standard version of the tarpaulin body, a well thought-out overall solution is available with which the respective trailer can be quickly and easily supplemented with the tarpaulin if required. As the tarpaulin body is placed on the outside of the trailer, the aluminium frame can be rolled up and down quickly and easily as a whole and with the help of two support wheels. The truck-quality tarpaulin used can be rolled up on all four sides. The desired colour can be selected using a colour sample card.

Also part of the standard design is the double interior lighting of the trailer on the front side of the frame, a loading aid mirror mounted on the left side as well as a winch clamping bracket placed in the front right of the tarpaulin frame.

Solutions for individual requirements

In order to meet the different and individual requirements of a tarpaulin structure, we develop the right solution for the respective application.

A comprehensive range of different functionalities and construction methods is available for this purpose. Folding and sliding versions can be combined with different heights, tarpaulin colours and accessories.

INDIVIDUAL TARPAULIN PROTECTION

ROBUST FRAME CONSTRUCTION

The solution with a big mouth

With the folding version of the tarpaulin body, the tarpaulins do not have to be rolled up. Instead, the rear side and the two side walls can be folded up quickly and without effort. The servo-assisted walls fold up automatically and provide free access to the cargo without much effort. At the same time, the folded-up walls are also excellent as sun or rain protection.

Curtain up with sliding tarpaulins

Another variant of the tarpaulin bodies is the sliding tarpaulin. Thanks to the use of the practical skid locks, you can quickly reach the loaded vehicle even when space is limited. The tailgate can be optionally equipped with two gas pressure springs for opening and closing.

STABLE STRUCTURE GUARANTEES SAFETY WHEN DRIVING

LIGHTWEIGHT ALUMINIUM STRUTS
