

ALGEMA Blitzlader Heavy Duty
the XXL car transporter is longer and wider

Excellence. High quality. Attractiveness.

The efficient vehicles and trailers from ALGEMA FIT-ZEL
offer the right concept for every situation.

With the ALGEMA Blitzlader HD, a version of the articulated car transporter is now available, which, with a longer and wider loading area, also enables the transport of heavier vehicles. The impressive payload of up to 3.6 tonnes means its really heavy duty. Thanks to the wider and longer loading floor, transport possibilities are significantly expanded, not only for vans.

Longer and wider - The loading area of the Blitzlader HD

With a length of 6,200 mm and a width of 2,290 mm, the loading area of the Blitzlader HD offers the possibility to transport even longer and wider vehicles. Thanks to the valued Easy Load system, the vehicle is ready for loading in 8 seconds.

More payload expands transport options

With a payload of up to 3.6 tonnes, the Blitzlader's usual high payload for its class is further increased.

TECHNICAL DATA

Total permissible weight	up to 7.2 t depending on the chassis
Payload	up to 3.6 t depending on the chassis
Ramp angle	10.5°
Loading length	6,200 mm
Loading width	2,290 mm

Errors and omissions possible. All dimensions and weights are approximate.
Accessories/extra equipment increase the unladen weight. Illustrations may contain optional equipment.

Two axles save money

The Blitzlader HD starts with two axles. In addition to the advantages of lower tyre wear and fuel savings, another cost factor is the lower toll abroad, which makes the Blitzlader HD very cost-efficient.

High gross train weight and swivelling trailer coupling

With a gross combination weight of 10.5 tonnes, nothing stands in the way of using the Blitzlader HD as a road train. The automatically swivelling trailer coupling is helpful here, as it shortens the loading and unloading process.

ALGEMA BLITZLADER HD - ACCESSORIES - CHOOSE YOUR OPTIONAL ACCESSORIES

The XXL toolboxes - Large storage space

Lockable toolboxes always have their purpose. For the Blitzlader HD, two large toolboxes can be integrated in the side panel, left and right in front of the rear axle. The dimensions of the toolboxes are 1540 x 520 x 340 mm. They can be combined with another smaller tool box 1015 x 370 x 340 mm.

The practical automatic centre ramp

The high-quality aluminium centre ramp can be extended automatically and can also be controlled via the remote control. The Algema Blitzlader HD also offers you the right solution for loading vehicles with a narrow track width or trailers. The two loading rails are complemented by the optionally available centre ramp. This allows the loading process to be carried out quickly and without danger.

Get attention with the warning console

Good lighting conditions for safety. This also applies, for example, to loading vehicles on the road. For these and other purposes, the Blitzlader HD can be equipped with a 1500 mm wide warning console with LED flashing modules, two powerful LED work lights and a three-chamber rear light. The complete warning console is mounted on the large flyer or light carrier.

Automatic swivelling trailer coupling

This can be extended automatically with the practical radio remote control and is available for use in no time at all. Another plus point is that the swivelling trailer coupling is maintenance-free. The ball always remains connected to the receiver so that no dirt settles on it. This means that the swivelling trailer coupling combines all the positive features of the rigid and detachable trailer coupling.

Setting standards for efficient vehicle transport

Quality by conviction - Made in Germany

Practically oriented, high-quality solutions for vehicle transport - is what ALGEMA FIT-ZEL stands for. The company's over 35 years of experience of the company is reflected in the high-quality and innovative vehicles and trailers using the name Algema and FIT-ZEL as they cross Europe every day.

Car dealerships, workshops, paintshops, breakdown services, classic car enthusiasts, towing companies and other target groups trust in the vehicles and trailers which Eder not only assembles, but also conceives, designs and continuously develops. This is the basis for innovative solutions such as the lift axle on trailers or the articulated mechanism of the ALGEMA Blitzlader. For decades, ALGEMA FIT-ZEL has also been shaping the technical development in the European market for vehicle transporters.

"Made in Germany" and "made by Eder" stand equally for the company's high quality standards. The production of trailers and vans is still carried out at the Bavarian headquarters of Eder GmbH in Tuntenhausen near Rosenheim. In three modern production halls, an experienced team ensures that several hundred vehicles and trailers of consistently high-quality are produced every year.

In an area of around 4,000 square metres, the work processes were adapted to meet the demands of modern vehicle production. A second site was built in Neuhausen an der Krems, Austria, specifically for the production of aluminium parts. In terms of payload, ease of use, handling, functionality and design, the vehicles and trailers of the Algema and Fit-Zel brands continuously set standards. Today and also in the future.

Vehicle transporters and recovery companies have a special status. EDER GmbH is an industry member of the VBA (Association of Recovery and Towing Companies) and is always available to the organised towing trade with its entire know-how. EDER GmbH is certified for the highest quality through the official ISO certificate "Quality Management" in accordance with ISO 9001:2008.
